

Erratum: Wader Study Group Bulletin 116(2)

Due to a printing error Fig. 4 of the paper cited below in the last (August 2009) issue of the *Wader Study Group Bulletin* was incorrect in that the letters “a” and “b” above the columns in the two graphs were missing. The correct version of this figure appears below and it is suggested that readers write the letters on their copies of the graphs. The Editor apologises to the authors for this mistake.

Oosterveld, E.B., van Lierop, S. & Sikkema, M. 2009. Use of unfertilised margins on intensively managed grassland by Black-tailed Godwit *Limosa limosa* and Redshank *Tringa totanus* chicks. *Wader Study Group Bull.* 116(2): 69–74.

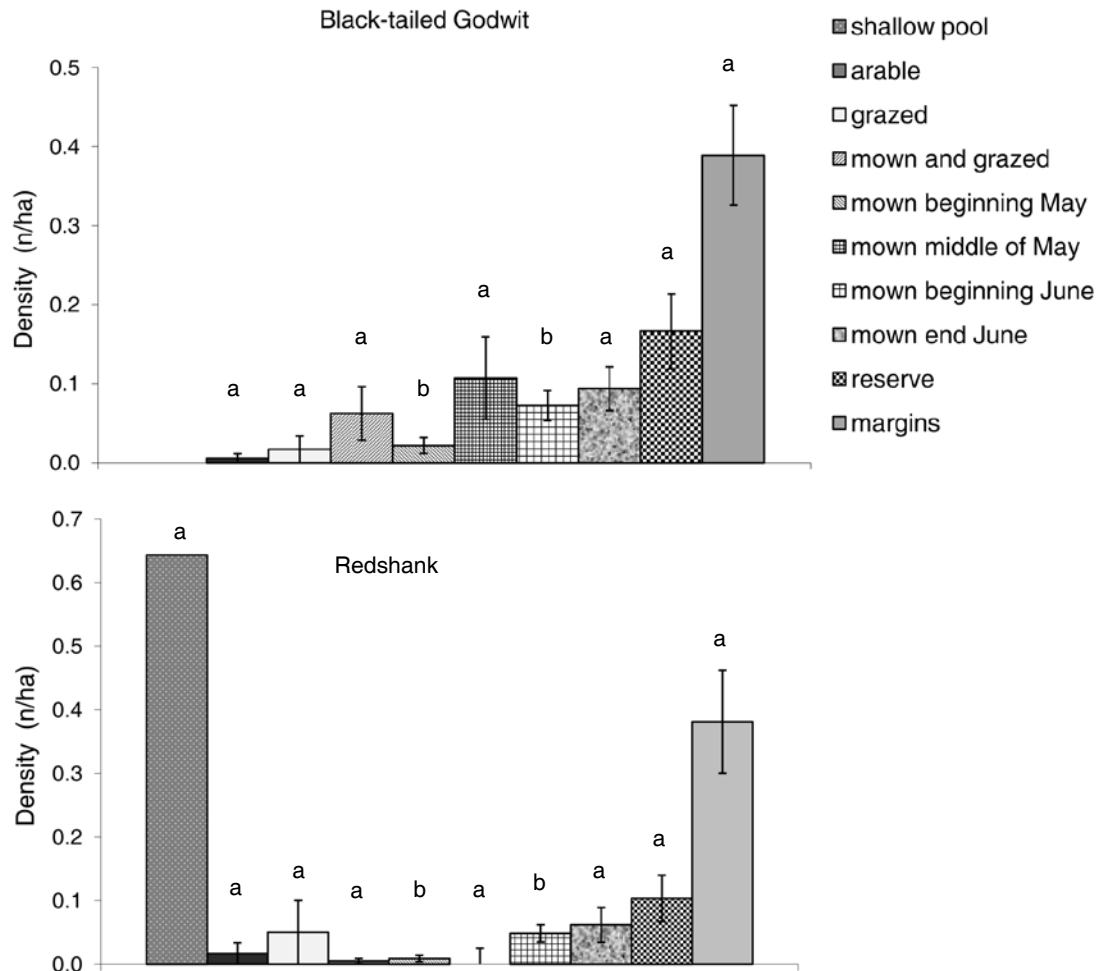

Fig. 4. Densities of Black-tailed Godwit and Redshank families (number/ha±SE) in the different management types on the study farm near Kollumerpomp, the Netherlands in May–June 2007. The letters above the columns (a & b) indicate significance of differences: non-significant ($P > 0.05$) if they are the same letter, significant ($P < 0.001$) if they are different letters (N = 159 Black-tailed Godwit families and 103 Redshank families).
